RESEARCH ASSIGNMENT 1

Database : It's an organised information stored for any analytics purposes, It's essential in the Modern World as it allows different organisations or companies to know how to run their businesses in a profitable way and understand any problem that may occur.

E.g 1. Government organisations that collect information about the population and Create Identification numbers such as Home affairs

E.g 2. H & M store, They provide cards to earn point to clients but that cards collect or record the information of each clients that purchases into their shops

2. Data Warehouse it's a platform where database is stored in a very large number. Database is simple informations that have been collected from different sources, it's fresh information. Data Warehouse is used by different companies so that they figure out how the sales, profit, loss are happening. The Data Warehouses collects all large numbers of Databases for analysis purposes for a positive outcome

3. What is Data Lake? Explain the concept and describe how it differs from a data warehouse.. When would a business prefer a data Lake over data warehouse.

=> A Data Lake is storage system that holds raw data in its original Format, whether it's structured, semi-structured or unstructured while Data Warehouse deals with structured Data. Businesses prefer Data Lake over Data Warehouse because It collects information or Data from many sources such as Visited Social Media, Reports and Data Lakes have cheaper storage solutions comparing to Data warehouses that uses processed and structured Data. Data Lake can be collected quickly and stored without cleaning or transforming it.
